

# PHP

[PHP is a high-level language for the web]

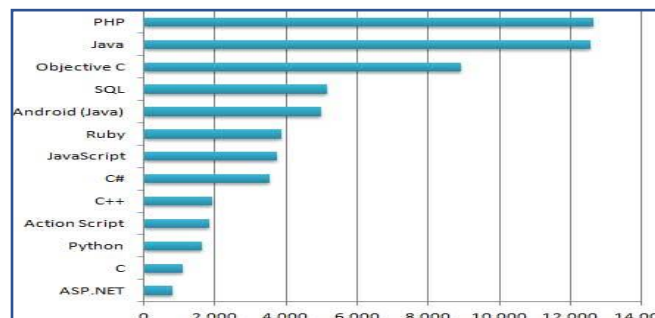

- Server side: Scripting Language.  
(Script : Mean it work faster than normal, cause script mean flexibility which nearest to being understand as well as fine from machine).

- To build Dynamic webpages (easy and fast).

- Php not a user interface, it's a server side, which work behind the scenes. (PHP is used by 77.4%)
- Old but gold, meaning still popular programming language as well {PHP Rate}.

- Need to knowledge with Html, Css. Before starting php.
- Need webserver to run and test your server {Xampp Server..etc}.
- Need Environment Editor such as {VS Code : many Features For Developing Environment {Plugins..etc} ..etc}. lets know more with our Course...
